# HOW TO READ CATALOGUE

## Steering & Suspension Part Number Assignment Rule

### Tie rod end

Always show "KTRXXXXX"  
Example : KTR10000

### Ball joint

Always show "KBJXXXXX"  
Example : KBJ10000

### Rack end

Always show "KREXXXXX"  
Example : KRE10000

### Stabilizer link

Position : Front  
Always show "KSLFXXXXX"  
Example : KSLF10000

Position : Rear  
Always show "KSLRXXXXX"  
Example : KSLR10000

# Steering

## *visual inspection*

### Rack end

- *Feels loose when driving*
- *Control of car is harder*

### Tie rod end

- *Front wheel is misaligned*
- *Uneven tire wear causes vibration*

### Ball joint

- *Clicking noise occurs while turning the steering at standstill*
- *Vibration is felt on the steering wheel*

### Stabilizer link

- *Noise is generated when driving through bumpy road*

# DID YOU KNOW?

*Time interval to replace new steering parts depend on road condition*

# QUESTIONS & ANSWERS

## 1. WHAT ARE STEERING AND SUSPENSION PARTS?

# Q1

Steering parts are the joints between the steering unit/rack and the wheel hub. This is used to help control the angle of the steering part when moving left or right. Also it is used to adjust the toe in/out for camber alignment of the front wheel.

Suspension parts, such as ball joint and stabilizer link, are used to control the stability of the car when driving on the road.

# Q2 HOW MANY TYPE OF STEERING AND SUSPENSION PARTS?

**Tie rod end** is widely used on the rack & pinion steering system and also on the steering box type. The outer tie rod end is connected to the steering knuckle, while the inner tie rod is connected to the steering rack.

The function of the tie rod end is to push and pull the front tires as the steering wheel turn.

**Tie rod end**

**Ball joint**

**Ball joint** connects the car wheels to the suspension system. Ball joints are made of a bearing stud and a socket. Basically ball joints allow the force and displacement of the wheel to be transferred to the suspension link. Control and support joints on the steering of a double wishbone front suspension system are provided for rotational freedom while steering is turned.

**Rack end**

**Rack end** is a component attached to the rack and pinion or steering rack. The function of the rack end is to absorb road condition in order to maintain vehicle handling.

**Stabilizer link**

**Stabilizer link** is a component of the suspension system which connects a sway bar to a shock absorber. Stabilizer links transmit the force to the sway bar to keep the vehicle stable.

# Q3

## HOW MANY TYPE OF BALL JOINT?

### 1. Metal to Plastic:

Advantage : Smooth and comfortable, maintenance free and covers a wider range application

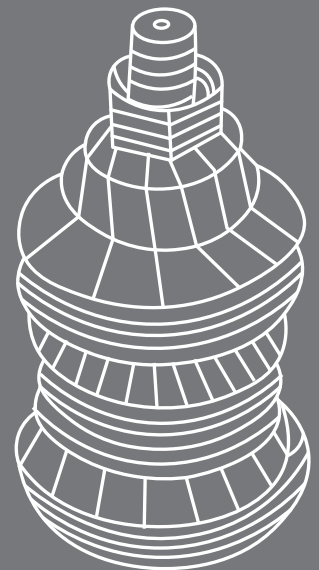

### 2. Metal to Metal:

Advantage : Durable to high temperature, Heavy Duty, but maintenance must be done by greasing every 3 or 6 months

# Q4

## HOW TO KNOW WHAT IS A GOOD BALL STUD?

Ball studs are subjected to high force and stress, especially on its neck. Good quality ball studs should be designed with a one piece body and the surface/hardness of the ball should be allowed to glide to avoid cracking, abrasion, and adhesion. A common indicator of this is when the stud produces noise or when the ball stud loses torque very fast.

# HOW TO INSPECT STEERING PARTS?

# Q5

Step 1 : To inspect the steering parts, lift the car with a Jack.

Step 2 : Place your hands on the tire at the 9 and 3 o'clock positions. Then push and pull the tire rapidly to check the tie rod end. If you feel looseness on its movement, it is a sign to replace tie rod end.

Step 1 : To inspect the ball joint, lift the car with a Jack.

Step 2 : Hold the wheel on both 12 o'clock and 6 o'clock position. Then push and pull the wheel to feel the looseness in its movement. If you feel any looseness when moving, it is a sign to replace ball joint.

# Q6

## WHEN DO YOU NEED TO REPLACE STEERING AND SUSPENSION PARTS?

Rusting or general wear and tear is present on the suspension parts.

# Q7

## VEHICLE SELF-INSPECTION!

### DIAGNOSING STEERING AND SUSPENSION PROBLEM!

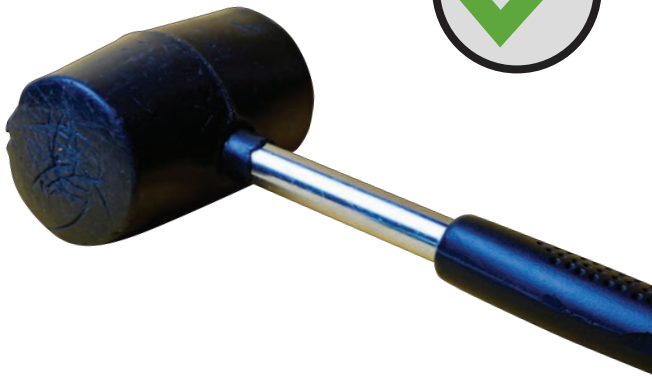

To check the ball joint, one may push and pull the tires from top to bottom to determine if there is unnecessary movement from the tires. If movement is present or should the boot be broken upon visual inspection; then it is time to replace the ball joint.

To inspect rack end, It is essential to remove the wheel and the rubber dust cover and check if there is any unnecessary movements when pushing and pulling the wheel carrier sideways (left and right). If unnecessary movement is present and if ball stud in the rack end or tie rod is loose from its housing. Then its is advised to replace your rack end and tie rod end.

To check the stabilizer link, it is advised to run the car on rough roads. When knocking sound occurs or when rubber boot is broken upon visual inspection. Then it is advisable to replace the stabilizer link.

# Q8

## HOW TO USE HAMMER TO INSTALL A BALL JOINT/BALL STUD?

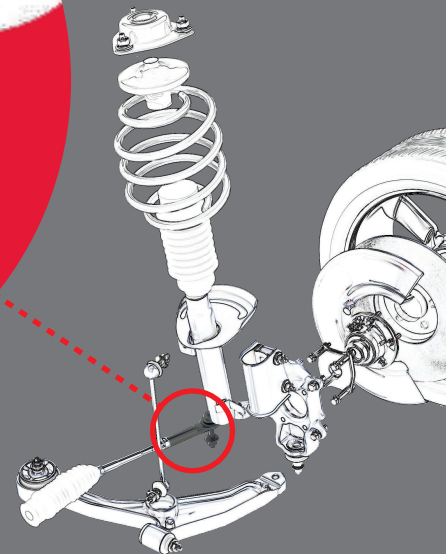

Use rubber hammer/mallet to remove and install the ball stud.

Caution! To avoid the deformation of ball stud, do not hit on top of the ball stud and do not use a common hammer.

# Q9

## WHERE IS TIE ROD END INSTALLED? AND WHAT IS IT'S FUNCTION?

The tie rod end connects the steering rack to the wheel hub. Tie rod ends are installed on both side of the rack end. This is used for wheel alignment during toe in/out and also used for the control of the wheel when turning left or right.
