PERFECTLY DESIGNED FOR A BALANCE OF SMOOTHNESS AND SPORTY DRIVING

THIS IS THE POINT OF "HLS VALVE"

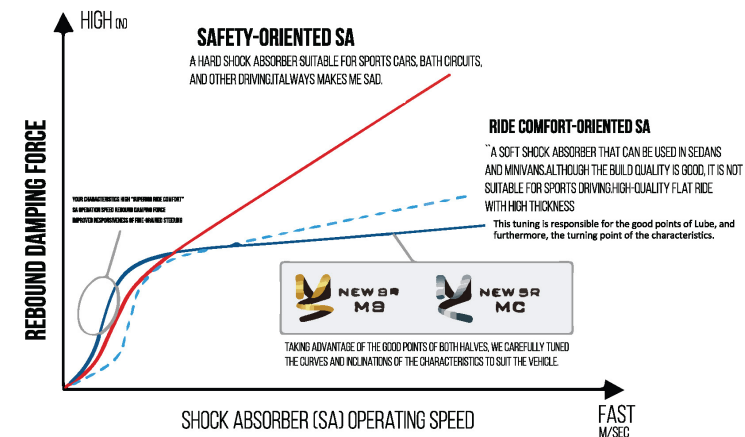

POINT 1 AIMING FOR BOTH HANDLING STABILITY AND RIDE COMFORT.

TYPICAL SHOCK ABSORBERS HAVE THE PROBLEM OF IMPROVING RIDE COMFORT BY IMPROVING HANDLING, AND REDUCING AERODYNAMICS WHEN RIDE COMFORT IS PRIORITIZED. THE HLS VALVE WAS DEVELOPED WITH THE AIM OF COEXISTING THE GOOD PARTS OF THESE CONTRADICTIONARY CHARACTERISTICS.

- BENEFITS:**
- UNMATCHED HANDLING AND STABILITY.
 - ELEVATED COMFORT AND RIDE QUALITY.
 - ENHANCED DURABILITY AND LONGEVITY.

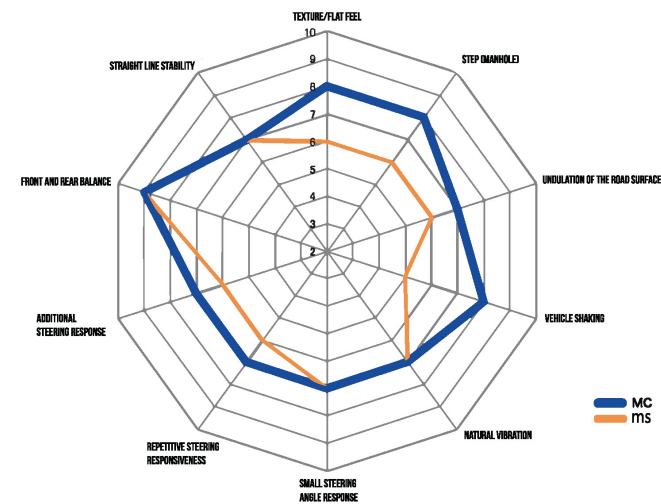

POINT 2 MADE POSSIBLE BY USING HLS VALVES

POINT 3 HLS VALVES CHANGE THE WAY YOU DRIVE.

While strengthening the good parts of the genuine product, we have improved the parts that are "missing". balance

It's not about running through the corner in front of us even 0.1 seconds faster,
 It's not about erasing the individuality of a car in exchange for improving ride comfort and driving performance. It's not about rushing too far ahead of the times and losing sight of the path we should take.

KYB's HLS valve

aims to balance handling and ride comfort. It allows for precise damping adjustments based on shock absorber speed, improving stability during turns and smoothing out harsh impacts. This technology enhances vehicle performance by addressing the limitations of conventional shock absorbers.

You'll understand the difference in values from conventional shock absorbers as soon as you turn the steering wheel.

**Optimization
from the Ground Up.**

KYB's new MORE series shock absorbers, MS and MC, are a significant departure from their previous NEW SR line. Unlike the older models that relied on standard dimensions and parts, the MORE series underwent a complete redesign, optimizing every aspect – length, damping, and accessories – for each specific vehicle. This involved extensive, uncompromising tuning and substantial development time, resulting in KYB's ultimate shock absorbers.
